Terry D. Fleming
AION Governance Verification System
Burlington, Ontario, Canada

Dear Terry,

The Digital Governance Council has read with interest your proposal for a new standard for ***Governance Verification Systems***. The Digital Governance Council, through our Standards Council of Canada accredited Standards Development Organization, the Digital Governance Standards Institute, wishes to further explore with you, through our network of subject matter expert's stakeholder feedback and interest in developing this proposal into a National Standard of Canada. This exploration will help define policy and practice options that exist to help meet some of these challenges and opportunities that have been identified in the proposal.

We feel that the proposal is an opportunity to offer concrete guidance for ethical, privacy preserving data management and governance. This will be particularly relevant to small and medium-sized organizations that serve some of Canada's most vulnerable populations.

As part of this further consideration, the proposal will be translated, a news story and social media announcement around the availability of the proposal will be developed and DGSI will open a full 60-day public review and comment period of the proposal as an exploratory item. We would ask that you please also share the proposal when available within your network.

Thank you again for your proposal submission for the development of a new standard through the National Standard of Canada process. I look forward to collaborating throughout the review period and reconnecting near its conclusion to share feedback and to discuss next steps. I have included as an attachment, an infographic of the standards development process for your information.

Sincerely,

Darryl Kingston
Executive Director
Digital Governance Standards Institute

About the Digital Governance Council

The Digital Governance Council is a member-driven organization that acts as a cross-sector neutral convener for Canada's executive leaders to identify, prioritize and act on digital governance opportunities and challenges. The Council leads an Executive Forum for council members, sets technology governance standards through the Digital Governance Standards Institute and certifies the compliance of Canadian organizations in the management of the effective and efficient use of digital technologies. To learn more about the organization and its initiatives, visit www.dgc-cgn.org or contact info@dgc-cgn.org

About the Digital Governance Standards Institute

The Digital Governance Standards Institute develops digital technology governance standards fit for global use. The Institute works with experts, as well as national and global partners and the public to develop national standards that reduce risk to Canadians and Canadian organizations adopting and using innovative digital technologies in today's digital economy. The Institute is an independent division of the Digital Governance Council. To learn more about the organization and its initiatives, visit www.dgc-cgn.org or contact info@dgc-cgn.org
